Physical and Behavioral Rehabilitation for Animals

## Orthopaedic dog beds

Orthopaedic dog beds made with Memory Foam are ideal for physically demanding dogs, elderly dogs, highly active dogs and dogs with joint (hip dysplasia) and spinal problems. Pets with such disabilities are often unable to gain the rest they would like when they lie down to sleep. For a restful sleep that's easy on the joints, a dog bed made of memory foam is just the thing. Beds made of orthopaedic memory foam have been confined to the human realm for many years, but not anymore. This high-tech material moulds to the curves and temperature of the body providing optimal relief from pressure and brilliant comfort. Lying on the memory foam of the Ortho-Bed gives your dog a great feeling of relief and a chance to rest its spine and joints.

Covers zip off for washing.

Remember to take into consideration the size of the dog as well as the weight. Some lightweight dogs have very long limbs so need lots of space to stretch out when sleeping or resting.
